Interdisciplinary Treatment Planning, Principles, Design, Implementation
Edited by Michael Cohen
This book articulates the process by which master clinicians treat their cases. In the first part of each chapter, 18 of the world’s most respected clinicians share the key principles that guide their case-planning decisions. In the second part, they present the diagnostic findings of one of their own cases, invite the reader to treatment planning, and present their own plan and the actual treatment rendered along with full-color images. With the authors representing every specialty in dentistry—periodontology, orthodontics, prosthodontics, endodontics, and oral and maxillofacial surgery—this book demonstrates comprehensive treatment-planning principles from the perspective of every clinician.

Esthetic Rehabilitation in Fixed Prosthodontics
Mauro Fradeani
This text provides a systematic approach to facial evaluation during esthetic treatment planning. Each chapter presents a different esthetic parameter involved in facial, dental, phonetic, and gingival analysis. This popular book is an invaluable tool for all clinicians practicing esthetic and restorative dentistry.

The Science and Art of Porcelain Laminate Veneers
Galip Gürel
This book guides the entire esthetic team in understanding the patient’s needs and formulating a treatment plan to address esthetic considerations as well as occlusal, periodontal, and functional requirements. It also discusses expanded PLV applications, minimally invasive tooth preparation, and impression techniques.

Bioesthetics in Oral Rehabilitation: Science, Art, and Creativity
Loris Prosper
This book describes a methodology for creating biomimetic restorations that harmonize with the remaining natural teeth. The authors analyze each phase of treatment, including the diagnosis and treatment planning, the stages of preparation and fabrication, and the cementation of the definitive restoration. All the essential components are covered, including occlusal analysis, soft tissue management, color selection, implant considerations, and guidelines for home maintenance. The merits of a multidisciplinary approach are shown within a functional esthetic paradigm in which the prosthodontist, surgeon, orthodontist, and dental technician work as a close-knit team to ensure a predictable and reproducible result.

Inspiration: People, Teeth, and Restorations
Edited by Luiz Narciso Baratieri
This stunning atlas represents over 25 years of dedicated study into the optical behavior of teeth and restorative materials. The practical purpose of this book is to outline the clinical sequences of how to use composite resins and dental ceramics to achieve the optical characteristics displayed in natural teeth. By blending art and dental science, the authors explore the underlying makeup of the layered structures of the teeth and reveal the techniques for mimicking natural tooth.

Advancements in restorative material formulations and adhesive technology have expanded the treatment possibilities for the clinician and technician and provided simpler, more conservative, and more economical solutions to many restorative and esthetic challenges. This book demonstrates these solutions step by step through the presentation of everyday clinical situations, relying on the scientific knowledge and clinical and laboratory expertise of an international team of masters. With new photographic techniques including ring flash and bilateral flash, new cases on composite resin restoration and porcelain inlays, and new techniques such as restoring the anterior alveolar ridge deficiency using stratified porcelain buildup, this second edition explores many facets of esthetic and restorative dentistry. Each chapter begins with a materials science introduction to the topic, followed by clinical applications and procedures illustrated with exquisite images. This combination of scientific, clinical, and laboratory information provides clinicians, technicians, and auxiliaries with the tools necessary to maximize their productivity while providing improved oral health care to their patients.

Esthetic and Restorative Dentistry (DVDs)
Douglas A. Terry and Willi Geller
These supplementary DVDs illustrate the procedures, techniques, and scientific concepts presented in the book. Each video begins with an introduction by Dr. Terry that touches on the science and application of the technique involved, followed by live demonstrations of that technique from clinical cases similar to those presented in the respective chapter.

Volume 1: Ceramic Materials (Chapter 4)
• An Interdisciplinary Process for the Preparationless Veneer

Volume 2: The Impression Process (Chapter 5)
• Soft Tissue Management
• Double-Cord Gingival Displacement Using an Elastomeric Impression Material
• The Digital Highway

Volume 3: Provisionalization (Chapter 7)
• A Composite Veneer Prototype Utilizing an Indirect/Direct Flowable Resin
• Managing Tooth Size Discrepancy for the Orthodontic Patient Using an Indirect/Direct Flowable Resin

Volume 4: Esthetic Post Systems (Chapter 8)
• Fundamental Concepts for Restoring the Intraradicular Space

Volume 5: Dental Photography (Chapter 11)
• Intraoral and Extraoral Photographic Documentation

Volume 6: Periodontal Plastic Surgery (Chapter 12)
• Clinical Crown Lengthening in the Esthetic Zone
• Clinical Crown Lengthening in the Esthetic Zone Utilizing an Internal Bevel Gingivectomy

EVOLUTION: Contemporary Protocols for Anterior Single-Tooth Implants
Iñaki Gamborena and Markus B. Blatz

This book beautifully showcases the concepts, materials, and techniques essential to mastering the most demanding of all surgical and restorative challenges: the anterior single-tooth implant. To achieve the long-lasting esthetic and functional results displayed in this clinical masterpiece, one must attend to the myriad details associated with each phase of treatment. Designed for a new generation of visually oriented learners, the book presents step-by-step clinical procedures that unfold like the frames of a film, so that readers may “watch” at their own pace and pause as necessary to contemplate these fine details. This experience will spark the curiosity, creativity, and imagination of even the most veteran surgeon.

Contents
Esthetic and Soft Tissue Considerations • Biologic Impact of Implant, Abutment, and Prosthetic Design • Ideal 3D Implant Placement • Creating a Natural Soft Tissue Contour • Laboratory Communication for Definitive Restoration • Definitive Restoration

Esthetics of Anterior Fixed Prosthodontics
Gerard J. Chiche and Alain Pinault

This classic book offers principles and methods for achieving the best possible esthetic results. Learn how the restorative dentist works with the dental technician, the periodontist, and the orthodontist. As clear as it is comprehensive, this book is invaluable to the general dentist, the specialist, and the laboratory technician.

World of Anterior Ceramic Restorations
Yeojoon Koh

This clinical atlas showcases anterior ceramic restorations that correct esthetic problems. Each case focuses on a distinct set of esthetic and dental conditions such as fracture, crowding, rotation, asymmetry, discoloration, contour, caries, or implant considerations, among others. The clinical images illustrate the procedures in a step-by-step fashion. This book is intended as a communication tool between the dentist, the ceramist, and the patient.

Bonded Porcelain Restorations in the Anterior Dentition: A Biomimetic Approach
Pascal Magne and Urs Belser

This book introduces a unique approach to esthetic restoration of the anterior dentition. Guided by the philosophy of biomimetics, the authors combine sound biologic principles with an overriding respect for the natural intact tooth to achieve esthetic satisfaction with bonded porcelain restorations. The reader will find all the information and step-by-step instruction needed to obtain the authors’ superior results, which are showcased throughout the book.

Tooth Whitening in Esthetic Dentistry
So-Ran Kwon, Seok-Hoon Ko, and Linda H. Greenwall

This two-volume guide describes the full range of professional tooth-whitening procedures. In addition, the authors address the topics of sensitivity, maintenance of bleaching results, and over-the-counter bleaching products. Useful tools such as a whitening algorithm, patient questionnaire, and tooth shade evaluation protocol are provided. The accompanying Tooth Whitening Communication Tool is a collection of treatment photographs to help the clinician communicate the expected outcome of whitening procedures to the patient.
